Test Strategy

For the time being, only integration test is used and unit test is planned, as well as the frontend testing as well using some automated systems and also asking groups of people to work on the app and collect the data and reflect on it.

For the dev ops, CI and SonarQube are applied and in the future CD will be added and deploying and testing the app on Docker containers in different environments will be also added.

User Acceptance Tests

Please find the user acceptance tests in the excel document in the documentation directory.
